California's Water Supply

drought - a long period of dry weather.

reclamation - the act of recycling or restoring something to a usable state.

Where do Californians get their water?

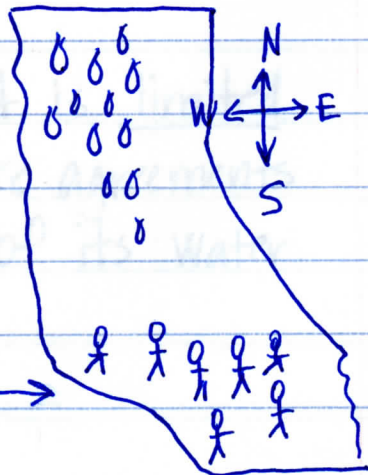

- ① running water - rivers
- ② standing water - lakes
- ③ groundwater - aquifers - 30%
- ④ aqueducts - channels that move water

→ Reclamation plants can help refill aquifers

? What is the relationship between the location of precipitation and the location of water users in CA?

lots of rain, not many people

lots of people, not much rain

Reflection of Article:

How is a water treatment plant just like a natural river?

restoration = the act of restoring or
